KVM Switch
CS1308 / CS1316
User Manual
EMC Information

FEDERAL COMMUNICATIONS COMMISSION INTERFERENCE STATEMENT: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

The device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

FCC Caution: Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

CE Warning: This is a class A product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

User Notice
All information, documentation, and specifications contained in this manual are subject to change without prior notification by the manufacturer. The manufacturer makes no representations or warranties, either expressed or implied, with respect to the contents hereof and specifically disclaims any warranties as to merchantability or fitness for any particular purpose. Any of the manufacturer's software described in this manual is sold or licensed as is. Should the programs prove defective following their purchase, the buyer (and not the manufacturer, its distributor, or its dealer), assumes the entire cost of all necessary servicing, repair and any incidental or consequential damages resulting from any defect in the software.

The manufacturer of this system is not responsible for any radio and/or TV interference caused by unauthorized modifications to this device. It is the responsibility of the user to correct such interference.

The manufacturer is not responsible for any damage incurred in the operation of this system if the correct operational voltage setting was not selected prior to operation. PLEASE VERIFY THAT THE VOLTAGE SETTING IS CORRECT BEFORE USE.
Package Contents

The CS1308 / CS1316 package consists of:

- 1 CS1308 / CS1316 KVM Switch with Rack Mount Kit
- 1 Console cable
- 1 Firmware Upgrade cable
- 1 Foot Pad set (4 pads)
- 1 Power Adapter (AC Models)
- 1 User Instructions*

Check to make sure that all the components are present and that nothing got damaged in shipping. If you encounter a problem, contact your dealer.

Read this manual thoroughly and follow the installation and operation procedures carefully to prevent any damage to the unit, and/or any of the devices connected to it.

* Features may have been added to the CS1308 / CS1316 since this manual was published. Please visit our website to download the most up-to-date version of the manual.

About this Manual

This user manual is provided to help you get the most from your CS1308 / CS1316 system. It covers all aspects of installation, configuration and operation. An overview of the information found in the manual is provided below.

**Chapter 1, Introduction**, introduces you to the CS1308 / CS1316 system. Its purpose, features and benefits are presented, and its front and back panel components are described.

**Chapter 2, Hardware Setup**, describes how to set up your installation. The necessary steps – from a basic single level hookup to a complete 17-switch two level operation are provided.

**Chapter 3, Basic Operation**, explains the fundamental concepts involved in operating the CS1308 / CS1316.

**Chapter 4, OSD Operation**, provides a complete description of the CS1308 / CS1316 OSD (on-screen display), and how to work with it.

**Chapter 5, Keyboard Port Operation**, details all of the concepts and procedures involved in the hotkey operation of your CS1308 / CS1316 installation.

**Chapter 6, Keyboard Emulation**, provides tables that list the PC to Mac and PC to Sun keyboard emulation mappings.

**Chapter 7, The Firmware Upgrade Utility**, explains how to use this utility to upgrade the CS1308 / CS1316 firmware with the latest available versions.

**An Appendix**, provides specifications and other technical information regarding the CS1308 / CS1316.
Conventions

This manual uses the following conventions:

Monospaced Indicates text that you should key in.

[] Indicates keys you should press. For example, [Enter] means to press the Enter key. If keys need to be chorded, they appear together in the same bracket with a plus sign between them: [Ctrl+Alt].

1. Numbered lists represent procedures with sequential steps.

♦ Bullet lists provide information, but do not involve sequential steps.

→ Indicates selecting the option (on a menu or dialog box, for example), that comes next. For example, Start → Run means to open the Start menu, and then select Run.

⚠ Indicates critical information.

Product Information

Overview

The CS1308 / CS1316 KVM switch allows access and control up to 256 computers from a single console (keyboard, mouse, and monitor). As many as 16 additional switches can be cascaded bringing the total number of connected computers to 256 computers that can be controlled from a single keyboard-monitor-mouse console. Additionally, the CS1308 / CS1316 features a compact design that allows installation in a 1U system rack.

Setup is fast and easy; plugging cables into their appropriate ports is all that is needed. The switch supports both USB and PS/2 connections for the console and computers. The CS1308 / CS1316 intercepts keyboard input directly, thus eliminating the need for any software configuration. Switching between computers can be easily accomplished either by manually pressing the front panel push button port LEDs, entering hotkey combinations from the keyboard, or via a menu driven multilingual on-screen display (OSD) system.

A convenient auto-scan feature permits automatic scanning and monitoring of activities on all connected computers. Lastly, the CS1308 / CS1316 offers benefits such as: a) managing multiple computers from a single console, b) eliminating the expense of having to purchase a separate keyboard, monitor, and mouse for each computer, c) space and energy costs savings, and d) helping create a greener environment by reducing the amount of waste.
Features

- A single console controls up to 256 computers
- Cascade to 2 levels – connect up to 16 switches
- Dual Interface – supports computers with PS/2 or USB keyboards and mice
- Multiplatform support – Windows 2000/XP/Vista, Linux, Mac, and Sun
- Supports USB keyboards for PC, Mac and Sun
- Auto PS/2 and USB interface detection
- USB or PS/2 keyboard and mouse emulation – computers boot even when the console focus is elsewhere
- Superior video quality – up to 2048 x 1536; DDC2B
- Convenient computer switching via front panel pushbuttons, hotkeys, or multilingual on-screen display (OSD) menu
- Two level password security - only authorized users view and control computers; up to four users and an administrator with a separate profile for each
- Auto Scan feature for monitoring user-selected computers
- Broadcast mode – operations simultaneously performed on all selected computers
- Hot pluggable – add or remove computers without having to power down the switch
- Buzzer on/off via hotkey and OSD
- Firmware upgradeable
- No software installation required
- Designed for desktop or rack mount (19” system rack, 1U)
Requirements

Console
The following hardware components are required for the KVM console:

- A VGA, SVGA, or multisync monitor capable of displaying the highest resolution provided by any computer in the installation.
- A keyboard and mouse (USB or PS/2)

Computers
The following hardware components are required for each computer:

- A VGA, SVGA, or multisync video graphics card with an HDB-15 port.
- PS/2 mouse and keyboard ports (6-pin Mini-DIN), at least one USB port.

Cables
Substandard cables might damage the connected devices or degrade overall performance. For optimum signal integrity and to simplify the layout use the high quality custom cable sets described below.

Chapter 2
Hardware Setup

Overview

The CS1308 / CS1316 is a combo switch designed to work with USB and PS/2 interfaces. It utilizes custom KVM cables that serve as intermediaries between the switch and the connected computers. A separate custom KVM cable is required for each computer connection. Custom cables of various lengths are listed in the Cables section on page 5. Consult your dealer to find out which one fit your needs best.

Before You Begin

1. Important safety information regarding the placement of this device is provided on page 47. Please review it before proceeding.

2. Make sure that the power to any device that you connect to the installation has been turned off. You must unplug the power cords of any computers that have the Keyboard Power On function.
Stacking and Rack Mounting

The CS1308 / CS1316 can be stacked on a desktop or rack mounted in 1U of rack space. The procedures are described in the following sections.

**Note:**
1. Allow at least 5.1 cm on each side for adequate ventilation and 12.7 cm at the rear for power cord and cable clearance.
2. The rack mount kit does not include cage nuts. If you need additional screws or cage nuts, contact your rack dealer.
3. For instructional purposes, the CS1316 is pictured in the diagrams that follow. However, the CS1308 is the same as the CS1316, except that it has 8 KVM ports instead of 16.

**Stacking**

The CS1308 / CS1316 can be placed on any level surface that can safely support its weight and the weight of the attached cables. Ensure that the surface is clean and free of materials that can block the exhaust vents or otherwise interfere with normal operation of the KVM switch. Peel the protective backing off of the foot pads, and affix them to the bottom panel of the CS1308 / CS1316 at the corners, as shown in the diagram below.
Rack Mounting – Front

1. Remove the screws from the left and right side panels near the front of the switch (2 screws total).

2. Use the M3 x 8 Phillips hex head screws supplied with the rack mount kit to screw the rack mounting brackets onto the side panels near the front of the unit.

(Continues on next page.)
3. Place the CS1308 / CS1316 in the rack. Position it so that the holes in the mounting brackets line up with the holes in the rack. Secure the mounting brackets to the front of the rack.

(Continued from previous page.)
Rack Mounting – Rear

1. Remove 1 screws each from the left and right sides of the switch (2 screws total) near the rear of the unit.

2. Use the M3 x 8 Phillips head hex screws supplied with the rack mount kit to screw the rack mounting brackets into the sides at the rear of the unit.

(Continues on next page.)
3. Place the KVM switch in the rack. Position it so that the holes in the mounting brackets line up with those in the rack. Secure the mounting brackets to the rear of the rack.

Grounding

To prevent damage to your installation it is important that all devices are properly grounded. Use a grounding wire to ground the CS1308 / CS1316 by connecting one end of the wire to the grounding terminal, and the other end of the wire to a suitable grounded object.
Single Level Installation

In a single level installation, there are no additional switches cascaded from the first unit. To set up a single level installation do the following:

1. Ground the CS1308 / CS1316 and make sure that power has been turned off to all the computers you will be connecting up.

2. Using the console cable provided, connect a keyboard, mouse, and monitor to the CS1308 / CS1316 console port. Refer to the Cable Connection Diagrams on the following page.

3. Use KVM cable sets* (as described in the Cables section on page 3), to connect any available KVM port to the keyboard, video and mouse ports of the computer you are installing. Refer to the KVM Cable Installation Diagrams on the following page.

4. Plug the power adapter cable into the CS1308 / CS1316 power jack, then plug the power adapter into an AC power source.

5. Turn on the power to the computers.

Single Level Installation Diagram

Note: The numbers in the diagram correspond to the numbered steps above.

* Contact your KVM switch dealer for ordering information.
Cable Connection Diagrams

Console Cable Installation Diagram

KVM Cable Installation Diagrams

USB KVM Cable Connection

PS/2 KVM Cable Connection
Two Level Installation

To control even more computers, up to 16 additional switches can be cascaded from the first CS1308 / CS1316. As many as 256 computers can be controlled from a single console in a complete installation. Tables showing the relation between the number of computers and the number of CS1308 / CS1316 units needed to control them are provided on page 52 in the Appendix.

To set up a two level installation, do the following:

1. Ground the master CS1308 / CS1316 and make sure that power has been turned off to all the computers you will be connecting up.

2. Using the console cable provided, connect a keyboard, mouse, and monitor to the CS1308 / CS1316 console port. Refer to the *Cable Connection Diagrams* on the following page.

3. Using a KVM cable, connect any available KVM port on the master CS1308 / CS1316 to the console port on the slave CS1308 / CS1316.

4. Use KVM cable sets (described in the *Cables* section, page 3), to connect any available KVM port on the CS1308 / CS1316 installation to the keyboard, video and mouse ports of the computers you are installing.

5. Repeat the above steps for any additional units you wish to add to the installation.

6. The Power On sequence requires that all slave units be powered on first. After they are all on, the master unit must be powered on next. Only after all the switches have been powered on in this sequence, can the computers be powered on.
Two Level Installation Diagram
Chapter 3
Basic Operation

Hot Plugging

The CS1308 / CS1316 supports hot plugging – components can be removed and added back into the installation by unplugging their cables from the ports without the need to shut the unit down. In order for hot plugging to work properly, the procedures described below must be followed:

**Hot Plugging KVM Ports**

In order for the OSD menus to correspond to KVM port changes, you must manually reconfigure the OSD to reflect the new port information. See the F3 SET (page 23) and F4 ADM (page 25), functions for details.

**Note:** If the computer's operating system does not support hot plugging, this function may not work properly.

**Hot Plugging Console Ports**

The keyboard, monitor, and mouse can all be hot plugged. When hot plugging the mouse:

- You may unplug and replug the mouse (to reset the mouse, for example), as long as you use the same mouse.

- If you plug in a different mouse, all the computers on the installation must be shut down for 10 seconds, then restarted following the power up sequence described under Step 6 on page 15.

**Note:** If, after hot plugging there is no response to keyboard and/or mouse input, perform a *Keyboard and Mouse Reset* by simultaneously pressing the 1 and 2 front panel port LEDs.

**Port Selection**

The CS1308 / CS1316 provides three port selection methods to access the computers on the installation: Manual, an OSD (on-screen display) menu system, and Hotkeys. See Chapter 4, *OSD Operation* and Chapter 5, *Keyboard Port Operation* for more information.
Manual Port Switching

Use the front panel pushbutton switches to manually switch to a port.

Port ID Numbering

Each port on a CS1308 / CS1316 installation is assigned a unique Port ID. You can directly access any computer on any level of the installation by specifying the Port ID that the computer is connected to – either with the OSD (see OSD Operation, page 19), or with the Hotkey port selection method (see Keyboard Port Operation, page 31).

- A computer attached to a master unit has a two digit Port ID (from 01–08 for the CS1308; from 01–16 for the CS1316), that corresponds to the KVM port number that it is connected to.
- A computer attached to a slave unit has a four digit Port ID. The first two digits represent the KVM port number on the master and the second two digits represent the KVM port number on the slave unit that the computer is connected to. For example, a Port ID of 02–16 would refer to a computer that is connected to KVM port 16 of a slave unit that links back to KVM port 2 of the master unit.

Powering Off and Restarting

If it becomes necessary to power off a CS1308 / CS1316, do the following before restarting it:

1. Unplug the CS1308 / CS1316 from its power source.
2. Shut down all the computers that are attached to it.

**Note:** Unplug the power cords of any computers that have the Keyboard Power On function. Otherwise, the CS1308 / CS1316 will still receive power from the computers.

3. Wait 10 seconds, then plug the CS1308 / CS1316 back in.
4. Power on the computers.

**Note:** If there are stations cascaded down from the master CS1308 / CS1316, all the cascaded stations and the computers attached to them must be shut down as well.
Chapter 4
OSD Operation

OSD Overview

The on-screen display (OSD) is a mouse and keyboard enabled, menu driven method to handle computer control and switching operations. All procedures start from the OSD main screen.

Manufacturing Number

The “MFG Number” (Manufacturing Number) is an internal serial number used by ATEN’s factory and technical support staff to identify products. This number does not affect products’ warranty. If your product requires after-sales services, you may provide the MFG Number to ATEN’s sales or technical support staff to identify the product and model number.

OSD Login

The OSD incorporates a two level (administrator / user) password system. Before the OSD main screen displays, a login screen appears requiring a password. If this is the first time that the OSD is used, or if the password function has not been set, simply press [Enter]. The OSD main screen displays in administrator mode. In this mode, you have administrator privileges, with access to all administrator and user functions, and can set up operations (including password authorization) as you like. If the password function has been set, you must provide an appropriate administrator/user password in order to access the OSD.

OSD Hotkey

You can display the OSD on the console monitor while also viewing the display of any port on the CS1308 / CS1316 by pressing the [Scroll Lock] key twice.

Note: You can optionally change the OSD hotkey to the Ctrl key, in which case you would press [Ctrl] twice (see OSD Hotkey, page 23). With this method, you must press the same [Ctrl] key.
OSD Main Screen

When you invoke the OSD, a screen similar to the one below appears:

![OSD Main Screen](image)

**Note:**
1. The diagram depicts the administrator's main screen. The user main screen does not show the F4 and F6 functions, since these are reserved for the administrator and can't be accessed by users.
2. The OSD always starts in list view, with the highlight bar at the same position it was in the last time it was closed.
3. Only the ports that have been set accessible by the administrator for the current logged in user are visible (see \textit{SET ACCESSIBLE PORTS}, page 25, for details).
4. If the port list is collapsed, click on a switch number, or move the highlight bar to it then press the right arrow key to expand the list. Similarly, to collapse a switch’s port list, click on the switch number, or move the highlight bar to it then press the left arrow key to collapse the list.

**OSD Main Screen Headings**

<table>
<thead>
<tr>
<th>Column</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>PN</td>
<td>This column lists the port ID numbers for all the KVM ports on the installation. The simplest method to access a particular computer is move the highlight bar to it, then press \textbf{Enter}.</td>
</tr>
<tr>
<td>QV</td>
<td>If a port has selected for quick view scanning (see \textit{Set Quick View Ports}, page 27), an arrowhead displays in this column.</td>
</tr>
<tr>
<td>☀</td>
<td>The computers that are powered on and are online have a sun symbol in this column.</td>
</tr>
<tr>
<td>NAME</td>
<td>If a port has been given a name (see \textit{Edit Port Names}, page 26), its name appears in this column.</td>
</tr>
</tbody>
</table>
OSD Navigation

- To dismiss the menu, and deactivate OSD, click the X at the upper right corner of the OSD window; or press [Esc].
- To log out, click F8 at the top of the main screen, or press [F8].
- To move up or down through the list one line at a time, click the up and down triangle symbols (▲▼) or use the up and down arrow keys. If there are more list entries than what can appear on the main screen, the screen will scroll.
- To move up or down through the list one screen at a time, click the up and down arrow symbols (↑↓), or use the [Pg Up] and [Pg Dn] keys. If there are more list entries than what can appear on the main screen, the screen will scroll.
- To activate a port, double-click it, or move the highlight bar to it then press [Enter].
- After executing any action, you automatically go back to the menu one level above.

OSD Functions

OSD functions are used to configure and control the OSD. For example, you can rapidly switch to any port, scan selected ports, limit the list you wish to view, designate a port as a quick view port, create or edit a port name, or make OSD setting adjustments.

To access an OSD function:

1. Either click a function key field at the top of the main screen, or press a function key on the keyboard.
2. In the submenus that appear make your choice either by double-clicking it, or moving the highlight bar to it, then pressing [Enter].
3. Press [Esc] to return to the previous menu level.
**F1: GOTO**

Clicking the **F1** field or pressing **[F1]** activates the GOTO function. GOTO allows you to switch directly to a port either by keying in the port's *Name*, or its *Port ID*.

- To use the name method, key in 1; key in the port's *Name*; then press **[Enter]**.
- To use the port ID method, key in 2; key in the *Port ID*; then press **[Enter]**.

**Note:** You can key in a partial name or port ID. In that case, the screen will show all the computers that the user has *View* rights to (see **SET ACCESSIBLE PORTS**, page 25), that match the name or port ID pattern, regardless of the current list settings (see **F2 LIST**, page 22, for details).

To return to the OSD main screen without making a choice, press **[Esc]**.

**F2: LIST**

This function lets you broaden or narrow the scope of which ports the OSD displays on the main screen. The submenu choices and their meanings are given in the table below.

<table>
<thead>
<tr>
<th>Choice</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>ALL</td>
<td>Lists all of the ports on the installation that have been set accessible by the administrator for the current logged in user.</td>
</tr>
<tr>
<td>QUICK VIEW</td>
<td>Lists only the ports that have been selected as quick view ports (see <strong>SET QUICK VIEW PORTS</strong>, page 27).</td>
</tr>
<tr>
<td>POWERED ON</td>
<td>Lists only the ports that have their attached computers powered on.</td>
</tr>
<tr>
<td>QUICK VIEW + POWERED ON</td>
<td>Lists only the ports that have been selected as quick view ports (see <strong>SET QUICK VIEW PORTS</strong>, page 27), and that have their attached computers powered on.</td>
</tr>
</tbody>
</table>

Move the highlight bar to the choice you want, then press **[Enter]**. An icon appears before the choice to indicate that it is the currently selected one.
F3: SET

This function allows the administrator and each user to set up his own working environment. A separate profile for each is stored by the OSD and is activated according to the username that was provided during login.

To change a setting:

1. Double-click it; or move the highlight bar to it, then press [Enter].

2. After you select an item, a submenu with further choices appears. To make a selection, either double-click it; or move the highlight bar to it, then press [Enter]. An icon appears before the selected choice to indicate which one it is. The settings are explained in the following table:

<table>
<thead>
<tr>
<th>Setting</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>OSD HOTKEY</td>
<td>Selects which hotkey activates the OSD function:</td>
</tr>
<tr>
<td></td>
<td>[Scroll Lock] [Scroll Lock] or [Ctrl] [Ctrl].</td>
</tr>
<tr>
<td></td>
<td>Since the [Ctrl] key combination may conflict with programs running on the computers, the default is the [Scroll Lock] combination.</td>
</tr>
<tr>
<td>PORT ID DISPLAY</td>
<td>Allows each user to customize the position where the port ID appears on the screen. The default is the upper left corner, but users can choose to have it appear anywhere on the screen.</td>
</tr>
<tr>
<td>POSITION</td>
<td>Use the mouse or the arrow keys plus Pg Up, Pg Dn, Home, End, and 5 (on the numeric keypad with Num Lock off), to position the port ID display, then double-click or press [Enter] to lock the position and return to the Set submenu.</td>
</tr>
<tr>
<td>PORT ID DISPLAY</td>
<td>Determines how long a port ID displays on the monitor after a port change has taken place. The choices are: 3 Seconds (default) and Always Off.</td>
</tr>
<tr>
<td>DURATION</td>
<td>Selects how the port ID is displayed: the port number plus the port name (PORT NUMBER + PORT NAME) (default); the port number alone (PORT NUMBER); or the port name alone (PORT NAME).</td>
</tr>
<tr>
<td>SCAN DURATION</td>
<td>Determines how long the focus dwells on each port as it cycles through the selected ports in Auto Scan mode (see F7 SCAN, page 29). Key in a value from 1–255 seconds, then press [Enter]. Default is 5 seconds; a setting of 0 disables the SCAN function.</td>
</tr>
</tbody>
</table>

(Continues on next page.)
Setting | Function
--- | ---
SCAN–SKIP MODE | Selects which computers will be accessed under skip mode (see F5 SKP, page 28), and Auto Scan mode (see F7 SCAN, page 29. Choices are:

**ALL** - All the ports which have been set accessible (see SET ACCESSIBLE PORTS, page 25);

**QUICK VIEW** - Only those ports which have been set accessible and have been selected as quick view ports (see SET QUICK VIEW PORTS, page 27);

**POWERED ON** - Only those ports which have been set accessible and are powered on;

**QUICK VIEW + POWERED ON** - Only those ports which have been set accessible and have been selected as quick view ports and are powered on. The default is **ALL**.

**Note:** The quick view choices only show up on the administrator’s screen, since only he has Quick View setting rights (see SET QUICK VIEW PORTS, page 27, for details).

SCREEN BLANKER | If there is no input from the console for the amount of time set with this function, the screen is blanked. Key in a value from 1–30 minutes, then press [Enter]. The default setting of 0 disables this function.

HOTKEY COMMAND MODE | Enables / disables the hotkey command function in case a conflict with programs running on the computers occurs.

HOTKEY | Sets the keyboard shortcut for invoking Hotkey Mode (see page 31). Choices are: NUM LOCK + - (minus) (default), and CTRL + F12.

OSD LANGUAGE | Sets the language used in the OSD. Choices are: English (default), German, Japanese, Simplified Chinese and Traditional Chinese.
Chapter 4. OSD Operation

**F4: ADM**

F4 is an administrator only function. It allows the administrator to configure and control the overall operation of the OSD. To change a setting double-click it, or use the up and down arrow keys to move the highlight bar to it then press [Enter].

After you select an item, a submenu with further choices to select from appears. Double-click an item, or move the highlight bar to it then press [Enter]. An icon appears before the selected item so that you know which one it is. The settings are explained in the following table:

<table>
<thead>
<tr>
<th>Setting</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>SET USER LOGIN</td>
<td>This function is used to set usernames and passwords for the administrator and users:</td>
</tr>
<tr>
<td></td>
<td>1. Usernames and passwords for one administrator and four users can be set.</td>
</tr>
<tr>
<td></td>
<td>2. After you select the administrator field or one of the user fields, a screen that allows you to key in the username and password appears. Usernames and passwords can be from 1 to 16 characters long and can consist of any combination of letters and numbers (A–Z, 0–9) and some additional keys (* ( ) + : , ? . / space).</td>
</tr>
<tr>
<td></td>
<td>3. For each individual, key in the username and password, confirm the password, then press [Enter].</td>
</tr>
<tr>
<td></td>
<td>4. To modify or delete a previous username and/or password, use the backspace key to erase individual letters or numbers. Press [Enter] when done.</td>
</tr>
<tr>
<td></td>
<td><strong>Note:</strong> Usernames and passwords are not case sensitive. Usernames are displayed in capital letters in the OSD.</td>
</tr>
<tr>
<td>SET ACCESSIBLE PORTS</td>
<td>This function allows the administrator to define user access to the computers on the installation on a port-by-port basis.</td>
</tr>
<tr>
<td></td>
<td>For each user, select the target port; then press the [Spacebar] to cycle through the choices: F (full access), V (view only), or blank. Repeat until all access rights have been set, then press [Enter]. The default is F for all users on all ports.</td>
</tr>
<tr>
<td></td>
<td><strong>Note:</strong></td>
</tr>
<tr>
<td></td>
<td>¦ A blank setting means that no access rights are granted. The port will not show up on the user's LIST on the main screen.</td>
</tr>
<tr>
<td></td>
<td>¦ The administrator always has full access to all ports.</td>
</tr>
</tbody>
</table>

(Continues on next page.)
(Continued from previous page.)

<table>
<thead>
<tr>
<th>Setting</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>SET LOGOUT TIMEOUT</td>
<td>If there is no input from the console for the amount of time set with this function, the user is automatically logged out. A login is necessary before the console can be used again. This enables other users to gain access to the computers when the original user is no longer accessing them, but has forgotten to log out. To set the timeout value, key in a number from 1–180 minutes, then press [Enter]. The default setting of 0 disables this function. <strong>Note:</strong> This feature does not function if Set Login Mode is disabled. See SET LOGIN MODE, page 27.</td>
</tr>
<tr>
<td>EDIT PORT NAMES</td>
<td>To help remember which computer is attached to a particular port, every port can be given a name. This function allows the administrator to create, modify, or delete port names. To edit a port name: 1. Click the port, or use the navigation keys to move the highlight bar to it, then press [Enter]. 2. Key in the new port name, or modify/delete the old one. The maximum number of characters allowed for the port name is 12. Legal characters include: • All alpha characters: A–Z • All numeric characters: 0–9 • * ( ) + : - , ? . / and Space Case does not matter; the OSD displays the port name in all capitals no matter how they were keyed in. 3. When you have finished editing, press [Enter] to have the change take effect. To abort the change, press [Esc].</td>
</tr>
<tr>
<td>RESTORE DEFAULT VALUES</td>
<td>This function is used to undo all changes and return the setup to the original factory default settings (see OSD FACTORY DEFAULT SETTINGS, page 53) except for the port name list, username and password information, which are saved.</td>
</tr>
<tr>
<td>CLEAR THE NAME LIST</td>
<td>This function clears the port name list.</td>
</tr>
<tr>
<td>ACTIVATE BEEPER</td>
<td>Choices are Y (on), or N (off). When activated, the beeper sounds whenever a port is changed; when activating the Auto Scan function (see F7 SCAN, page 29); or an invalid entry is made on an OSD menu. The default is Y.</td>
</tr>
</tbody>
</table>

(Continues on next page.)
Setting | Function
--- | ---
SET QUICK VIEW PORTS | This function lets the administrator select which ports to include as quick view ports.
  - To select/deselect a port as a quick view port, double-click the port, or use the navigation keys to move the highlight bar to it, then press `[Spacebar]`.
  - When a port has been selected as a quick view port, an icon displays in the QV column of the LIST on the main screen. When a port is deselected, the icon disappears.
  - If one of the quick view options is chosen for the LIST view (see `F2 LIST`, page 22), only a port that has been selected here will display on the list.
  - If one of the quick view options is chosen for auto-scanning (see `SCAN/SKIP MODE`, page 24), only a port that has been selected here will be auto-scanned.
The default has no ports selected for quick view.

SET OPERATING SYSTEM | This function allows the administrator to define the operating system for the computer connected to each KVM port. The default is WIN (PC compatible).
**To set the port operating system:**
1. From the list, select the port for which you wish to set the computer's operating system.
2. Set the operating system by pressing `[Spacebar]` to cycle through WIN, MAC, SUN, or OTHER.
3. Press `[Esc]` to exit. The operating system you selected is assigned to the KVM port.

FIRMWARE UPGRADE | In order to upgrade the CS1308 / CS1316 firmware (see page 41), you must first enable Firmware Upgrade mode with this setting.
When you bring up this menu, the current firmware version levels are displayed. Select Y to enable Firmware Upgrade mode, or N to leave this menu without enabling it.

SET KEYBOARD LANGUAGE | Sets the language for the computer keyboard attached to the KVM port. To select a keyboard language, double-click it, or use the navigation keys to move the highlight bar to it, then press `[Enter]`. Choices are: AUTO (default), ENGLISH (US), ENGLISH (UK), GERMAN (GER.), GERMAN (SWISS), FRENCH, HUNGARIAN, ITALIAN, JAPANESE, KOREAN, RUSSIAN, SPANISH, SWEDISH and TRADITIONAL CHINESE.

SET LOGIN MODE | This function allows the administrator to request users to login or not. When the login dialog box is disabled, the system disables the login/logout function. If the system is re-started, the login/logout function remains disabled.
F5: SKP

Clicking the F5 field or pressing [F5] invokes Skip (SKP) mode. This function enables you to easily skip backward or forward – switching the console focus from the currently active computer port to the previous or next available one.

- The selection of computers to be available for skip mode switching is made with the Scan–Skip mode setting under the F3: SET function (see page 23).
- When you are in skip mode:
  press [←] to switch to the previous computer in the list
  press [→] to switch to the next computer in the list

**Note:** When you skip, you only skip to the previous or next available computer that is in the Scan–Skip mode selection (page 24).

- If a port has been selected for Scan–Skip mode, when the focus switches to that port a left/right triangle symbol appears before its port ID display.
- While skip mode is in effect, the console will not function normally. You must exit skip mode in order to regain control of the console.
- To exit skip mode, press [Spacebar] or [Esc].

F6: BRC

F6 is an administrator only function. Clicking the F6 field, or pressing [F6], invokes Broadcast (BRC) mode. When this function is in effect, commands sent from the console are broadcast to all available computers on the installation.

This function is particularly useful for operations that need to be performed on multiple computers, such as performing a system wide shutdown, installing or upgrading software, etc.

- While BRC mode is in effect, a speaker symbol appears before the port ID display of the port that currently has the console focus.
- While BRC mode is in effect, the mouse will not function normally. You must exit BRC mode in order to regain control of the mouse.
- To exit BRC mode, invoke the OSD (with the OSD hotkey), then click the F6 field, or press [F6], to turn BRC mode off.
Chapter 4. OSD Operation

F7: SCAN

Clicking the F7 field or pressing [F7] invokes Auto Scan mode. This function allows you to automatically switch among the available computers at regular intervals so that you can monitor their activity without having to take the trouble of switching yourself.

- The selection of computers to be included for auto-scanning is made with the Scan–Skip mode setting under the F3: SET function (see page 24).
- The amount of time that each port displays for is set with the Scan Duration setting under the F3: SET function (see page 23). When you want to stop at a particular location, press the [Spacebar] to stop scanning.
- If the scanning stops on an empty port, or one where the computer is attached but is powered Off, the monitor screen will be blank, and the mouse and keyboard will have no effect. After the Scan Duration time is up, the scan function will move on to the next port.
- As each computer is accessed, an S appears in front of the port ID display to indicate that it is being accessed under Auto Scan mode.
- While Auto Scan mode is in effect, the console will not function normally. You must exit Auto Scan mode in order to regain control of the console.
- While you are in Auto Scan mode, you can pause the scanning in order to keep the focus on a particular computer either by pressing P, or with a left-click of the mouse. See Invoking Auto Scan, page 33, for details.
- To exit Auto Scan mode, press the [Spacebar] or [Esc].
F8: LOUT

Clicking the F8 field, or pressing [F8] logs you out of OSD control of the computers, and blanks the console screen. This is different from simply pressing [Esc] when you are at the main screen to deactivate the OSD. With this function you must log in all over again to regain access to the OSD, whereas with [Esc], all you have to do to reenter the OSD is tap the OSD hotkey.

Note: 1. When you reenter the OSD after logging out, the screen stays blank except for the OSD main screen. You must input your username and password before you can continue.

2. If you reenter the OSD after logging out, and immediately use [Esc] to deactivate the OSD without having selected a port from the OSD menu, a null port message displays on the screen. The OSD hotkey will bring up the main OSD screen.
Chapter 5
Keyboard Port Operation

Hotkey Port Control

Hotkey port control allows you to provide KVM focus to a particular computer directly from the keyboard. The CS1308 / CS1316 provides the following hotkey port control features:

- Selecting the Active Port
- Auto Scan Mode Switching
- Skip Mode Switching
- Computer Keyboard / Mouse Reset

The following settings can also be controlled in Hotkey mode:

- Setting the Beeper
- Setting the Quick Hotkey
- Setting the OSD Hotkey
- Setting the Port Operating System
- Restoring the OSD Default Values

Invoke Hotkey Mode

All hotkey operations begin by invoking Hotkey mode. There are two possible keystroke sequences used to invoke Hotkey mode, though only one can be operational at any given time:

Number Lock and Minus Keys

1. Hold down the Num Lock key;
2. Press and release the minus key;
3. Release the Num Lock key:

   \[ \text{Num Lock} + [-] \]

---

1. Make sure that the Hotkey Command Mode function is enabled and that you key in the appropriate Hotkey. See page 24 for details.
Control and F12 Keys

1. Hold down the Ctrl key;
2. Press and release the F12 key;
3. Release the Ctrl key:
   \[[Ctrl] + [F12]\]

When Hotkey mode is active:

- A command line appears on the monitor screen. The command line prompt is the word Hotkey: in white text on a blue background, and displays the subsequent hotkey information that you key in.
- Ordinary keyboard and mouse functions are suspended – only hotkey compliant keystrokes (described in the sections that follow), can be input.

Pressing [Esc] exits Hotkey mode.

Select the Active Port

Each KVM port is assigned a port ID (see Port ID Numbering, page 18). You can directly access any computer on the installation with a hotkey combination that specifies the port ID of the KVM port that a computer is connected to. To access a computer using hotkeys:

1. Invoke hotkey mode with the [Num Lock] + [-] or [Ctrl] + [F12] combination.
2. Key in the port ID.
   The port ID numbers display on the command line as you key them in. If you make a mistake, use [Backspace] to erase the wrong number.
3. Press [Enter].
   After you press [Enter], the KVM focus switches to the designated computer and you automatically exit hotkey mode.

**Note:** In hotkey mode, KVM focus will not switch to a port if an invalid switch or port number is entered. The hotkey command line will continue to display on the screen until you enter a valid switch and port number combination, or exit hotkey mode.
Auto Scan Mode

*Auto Scan* automatically switches, at regular intervals, among all the KVM ports that have been set as accessible under *Scan–Skip Mode*, so that their activity can be monitored automatically. See *Scan–Skip Mode* on page 23 for more information.

**Invoking Auto Scan:**

To start *Auto Scan*, key in the following Hotkey combination:

1. Invoke hotkey mode with the [Num Lock] + [-] or [Ctrl] + [F12] combination.

2. Press [A]. After you press A, then [Enter], you automatically exit hotkey mode, and enter *Auto Scan* mode.
   - While you are in *Auto Scan* mode, you can pause the scanning in order to keep the focus on a particular computer either by pressing P or with a left click of the mouse. During the time that auto-scanning is paused, the command line displays: **Auto Scan: Paused**.

   *Pausing* when you want to keep the focus on a particular computer is more convenient than exiting *Auto Scan* mode because when you resume scanning, you start from where you left off. If, on the other hand, you exited and restarted, scanning would start over from the very first computer on the installation.

   To resume Auto Scanning, press any key or left-click. Scanning continues from where it left off.

   - While *Auto Scan* mode is in effect, ordinary keyboard and mouse functions are suspended – only *Auto Scan* mode compliant keystrokes and mouse clicks can be input. You must exit *Auto Scan* mode in order to regain normal control of the console.

3. To exit *Auto Scan* mode press [Esc] or [Spacebar]. Auto-scanning stops when you exit *Auto Scan* mode.
Skip Mode

This feature allows you to switch between computers in order to monitor them manually. You can dwell on a particular port for as long as you like – as opposed to auto-scanning, which automatically switches after a fixed interval. To invoke Skip mode, key in the following hotkey combination:

1. Invoke hotkey mode with the [Num Lock] + [-] or [Ctrl] + [F12] combination.

2. Key in [Arrow]
   - Where [Arrow] refers to one of the arrow keys. After you press an arrow, you automatically exit hotkey mode and enter Skip mode where you can switch ports as follows:

| ← | Skips to the first accessible port. (See Scan/Skip Mode, page 24, for information regarding accessible ports.) |
| → | Skips to the next accessible port. |

- Once you are in Skip mode, you can keep on skipping by pressing the arrow keys. You don't have to use the [Num Lock] + [-] combination again.
- While Skip mode is in effect, ordinary keyboard and mouse functions are suspended – only Skip mode compliant keystrokes can be input. You must exit Skip mode in order to regain normal control of the console.

3. To exit Skip mode, press [Esc] or [Spacebar].
Computer Keyboard / Mouse Reset

If the keyboard or mouse cease to function on the computer connected to the currently selected port, you can perform a keyboard / mouse reset on the computer. This function is essentially the same as unplugging and replugging the keyboard and mouse on the target computer. To perform a computer keyboard / mouse reset, key in the following hotkey combination:

1. Invoke hotkey mode with the [Num Lock] + [-] or [Ctrl] + [F12] combination.

2. Press [F5].

After you press [F5] you automatically exit Hotkey mode and regain keyboard and mouse control on the computer connected to the KVM port. If you fail to regain keyboard / mouse control on the computer after pressing [F5], perform a console keyboard and mouse reset. For more information see Port LEDs, page 5.

Hotkey Beeper Control

The beeper (see Activate Beeper, page 26) can be hotkey toggled on and off. To toggle the beeper, key in the following hotkey combination:

1. Invoke hotkey mode with the [Num Lock] + [-] or [Ctrl] + [F12] combination.

2. Press [B].

After you press [B], the beeper toggles on or off. The command line displays Beeper On or Beeper Off for one second; then the message disappears and you automatically exit hotkey mode.
Quick Hotkey Control

The *Quick Hotkey* (see *HOTKEY*, page 24) can be toggled between 
[Num Lock] + [-], and [Ctrl] + [F12]. To toggle the *Quick Hotkey*:

1. Invoke hotkey mode with the [Num Lock] + [-] or [Ctrl] + [F12] 
   combination.
2. Press [H].

After you press [H], the command line displays *HOTKEY HAS BEEN 
CHANGED* for one second; then the message disappears and you 
automatically exit *Hotkey* mode.

OSD Hotkey Control

The *OSD Hotkey* (see *OSD HOTKEY*, page 23) can be toggled between [Scroll 
Lock], [Scroll Lock] and [Ctrl], [Ctrl]. To toggle the *OSD Hotkey*, key in the 
following hotkey combination:

1. Invoke hotkey mode with the [Num Lock] + [-] or [Ctrl] + [F12] 
   combination.
2. Press [T].

After you press [T], the command line displays *HOTKEY HAS BEEN 
CHANGED* for one second; then the message disappears and you 
automatically exit *Hotkey* mode.
Port OS Control

A port’s operating system can be changed to match that of the computer attached to the port. To change a port’s operating system, key in the following hotkey combination:

1. Invoke hotkey mode with the [Num Lock] + [-] or [Ctrl] + [F12] combination.

2. Key in [Function], where [Function] refers to one of the function keys in the following table:

<table>
<thead>
<tr>
<th>Key</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>F1</td>
<td>Sets the Port OS to Windows</td>
</tr>
<tr>
<td>F2</td>
<td>Sets the Port OS to Mac</td>
</tr>
<tr>
<td>F3</td>
<td>Sets the Port OS to Sun</td>
</tr>
</tbody>
</table>

After pressing a function key you automatically exit Hotkey mode.

Restore Default Values

This administrator only hotkey restores the CS1308 / CS1316 default values. See RESTORE DEFAULT VALUES, page 26. To restore the default values, key in the following hotkey combination:

1. Invoke hotkey mode with the [Num Lock] + [-] or [Ctrl] + [F12] combination.

2. Press [R].

3. Press [Enter].

After you press [Enter], the command line displays RESET TO DEFAULT SETTING for three seconds; then the message disappears and you automatically exit Hotkey mode.
## Hotkey Summary Table

<table>
<thead>
<tr>
<th>Hotkey Combination</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>[Num Lock] + [-] or [Ctrl] + [F12]</td>
<td>Invokes Auto Scan mode. When Auto Scan mode is in effect, [P] or left-click pauses auto-scanning. When auto-scanning is paused, pressing any key or another left-click resumes auto-scanning.</td>
</tr>
<tr>
<td>[A] [Enter] or [Q] [Enter]</td>
<td>Toggles the beeper on or off.</td>
</tr>
<tr>
<td>[B]</td>
<td>Toggles the Quick Hotkey invocation keys between [Ctrl] + [F12] and [Num Lock] + [-].</td>

Chapter 6
Keyboard Emulation

Mac Keyboard

The PC compatible (101/104 key) keyboard can emulate the functions of the Mac keyboard. The emulation mappings are listed in the table below.

<table>
<thead>
<tr>
<th>PC Keyboard</th>
<th>Mac Keyboard</th>
</tr>
</thead>
<tbody>
<tr>
<td>[Shift]</td>
<td>Shift</td>
</tr>
<tr>
<td>[Ctrl]</td>
<td>Ctrl</td>
</tr>

</tr>
<tr>
<td>[Ctrl] [3]</td>
<td></td>
</tr>
<tr>
<td>[Ctrl] [4]</td>
<td></td>
</tr>
<tr>
<td>[Ctrl] [H]</td>
<td>Help</td>
</tr>
<tr>
<td></td>
<td>Compose</td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Note: When using key combinations, press and release the first key (Ctrl), then press and release the activation key.
Chapter 7
The Firmware Upgrade Utility

Introduction

The purpose of the Windows-based Firmware Upgrade Utility is to provide an automated process for upgrading all CS1308 / CS1316 switches in an installation. The program comes as part of a Firmware Upgrade Package that is specific for each device.

As new firmware versions become available, new firmware upgrade packages are posted on our website. Check the website regularly to find the latest information and packages.

Downloading the Firmware Upgrade Package

To download the firmware upgrade package:

1. From a computer that is not part of your KVM installation go to our website and choose the model name that relates to your device. A list of available firmware upgrade packages appears.

2. Choose the firmware upgrade package that you wish to install (usually the most recent) and download it to your computer.
Preparation

To prepare for the firmware upgrade, do the following:

1. Use the *Firmware Upgrade Cable* provided with this unit to connect a COM port on your computer to the *Firmware Upgrade Port* of your switch.

2. Shut down all the computers on the KVM installation.

3. From your KVM switch console, login to the OSD as the administrator (see p. 19) and select the **F4 ADM** function.

4. Scroll down to FIRMWARE UPGRADE. Press [Enter], then press [Y] to invoke *Firmware Upgrade* mode (see p. 27.)
Starting the Upgrade

To upgrade the firmware:

1. Run the downloaded firmware upgrade package file either by double-clicking the file icon, or by opening a command line and entering the full path to it.

   The Firmware Upgrade Utility welcome screen appears:

   ![Firmware Upgrade Utility Welcome Screen]

   Note: The screens shown in this section are for reference only. The wording and layout of the actual screens put up by the Firmware Upgrade Utility may vary slightly from these examples.

2. Read and Agree to the License Agreement (enable the I Agree radio button).

3. Click Next to continue. The Firmware Upgrade Utility main screen appears. The devices capable of being upgraded are listed in the Device List panel:
4. Click **Next** to perform the upgrade.
   If you enabled *Check Firmware Version*, the Utility compares the device's firmware level with that of the upgrade files. If it finds that the device's version is higher than the upgrade version, it brings up a dialog box informing you of the situation and gives you the option to continue or cancel.

If you didn't enable *Check Firmware Version*, the Utility installs the upgrade files without checking whether they are a higher level, or not.

As the upgrade proceeds, status messages appear in the *Status Messages* panel, and the progress toward completion is shown on the *Progress* bar.
Upgrade Succeeded

After the upgrade has completed, a screen appears to inform you that the procedure was successful.

Click Finish to close the Firmware Upgrade Utility.

Upgrade Failed

If the Upgrade Succeeded screen doesn't appear, it means that the upgrade failed to complete successfully. See the next section, Firmware Upgrade Recovery, for how to proceed.
Firmware Upgrade Recovery

There are three conditions that call for firmware upgrade recovery:

- When a firmware upgrade is manually aborted.
- When the mainboard firmware upgrade fails.
- When the I/O firmware upgrade fails.

To perform a firmware upgrade recovery, do the following:

1. Power off the switch.

2. Connect the Firmware Upgrade Cable to its Firmware Upgrade Port.

3. Slide the Firmware Upgrade Recovery Switch to the Recover position.

4. Power the switch back on and repeat the upgrade procedure.

5. After the switch has been successfully upgraded, power it off, and slide the Firmware Upgrade Recovery Switch back to the Normal position.

6. If the switch is one of the cascaded switches, plug it back into the installation.

7. Power the switch back on.
Safety Instructions

General

- This product is for indoor use only.
- Read all of these instructions. Save them for future reference.
- Follow all warnings and instructions marked on the device.
- Do not place the device on any unstable surface (cart, stand, table, etc.). If the device falls, serious damage will result.
- Do not use the device near water.
- Do not place the device near, or over, radiators or heat registers.
- The device cabinet is provided with slots and openings to allow for adequate ventilation. To ensure reliable operation, and to protect against overheating, these openings must never be blocked or covered.
- The device should never be placed on a soft surface (bed, sofa, rug, etc.) as this will block its ventilation openings. Likewise, the device should not be placed in a built-in enclosure unless adequate ventilation has been provided.
- Never spill liquid of any kind on the device.
- Unplug the device from the wall outlet before cleaning. Do not use liquid or aerosol cleaners. Use a damp cloth for cleaning.
- The device should be operated from the type of power source indicated on the marking label. If you are not sure of the type of power available, consult your dealer or local power company.
- The device is designed for IT power distribution systems with 230V phase-to-phase voltage.
- To prevent damage to your installation it is important that all devices are properly grounded.
- The device is equipped with a 3-wire grounding type plug. This is a safety feature. If you are unable to insert the plug into the outlet, contact your electrician to replace your obsolete outlet. Do not attempt to defeat the purpose of the grounding-type plug. Always follow your local/national wiring codes.
- Do not allow anything to rest on the power cord or cables. Route the power cord and cables so that they cannot be stepped on or tripped over.
If an extension cord is used with this device make sure that the total of the ampere ratings of all products used on this cord does not exceed the extension cord ampere rating. Make sure that the total of all products plugged into the wall outlet does not exceed 15 amperes.

To help protect your system from sudden, transient increases and decreases in electrical power, use a surge suppressor, line conditioner, or un-interruptible power supply (UPS).

Position system cables and power cables carefully; Be sure that nothing rests on any cables.

Never push objects of any kind into or through cabinet slots. They may touch dangerous voltage points or short out parts resulting in a risk of fire or electrical shock.

Do not attempt to service the device yourself. Refer all servicing to qualified service personnel.

If the following conditions occur, unplug the device from the wall outlet and bring it to qualified service personnel for repair.

- The power cord or plug has become damaged or frayed.
- Liquid has been spilled into the device.
- The device has been exposed to rain or water.
- The device has been dropped, or the cabinet has been damaged.
- The device exhibits a distinct change in performance, indicating a need for service.
- The device does not operate normally when the operating instructions are followed.

Only adjust those controls that are covered in the operating instructions. Improper adjustment of other controls may result in damage that will require extensive work by a qualified technician to repair.

Do not connect the RJ-11 connector marked “UPGRADE” to a public telecommunication network.
Rack Mounting

- Before working on the rack, make sure that the stabilizers are secured to the rack, extended to the floor, and that the full weight of the rack rests on the floor. Install front and side stabilizers on a single rack or front stabilizers for joined multiple racks before working on the rack.

- Always load the rack from the bottom up, and load the heaviest item in the rack first.

- Make sure that the rack is level and stable before extending a device from the rack.

- Do not overload the AC supply branch circuit that provides power to the rack. The total rack load should not exceed 80 percent of the branch circuit rating.

- Make sure that all equipment used on the rack – including power strips and other electrical connectors – is properly grounded.

- Ensure that proper airflow is provided to devices in the rack.

- Ensure that the operating ambient temperature of the rack environment does not exceed the maximum ambient temperature specified for the equipment by the manufacturer.

- Do not step on or stand on any device when servicing other devices in a rack.
Technical Support

International
- For online technical support – including troubleshooting, documentation, and software updates: http://support.aten.com

Restoring Factory Default Settings

You can restore the factory default settings (listed on the next page) for the CS1308 / CS1316. With this procedure, the administrator and all user accounts are removed from the system. All port names and setting are also removed.

**Note:** A jumper cap is required when performing this procedure.

1. Unplug the CS1308 / CS1316 power adapter.
2. Remove the cover of the CS1308 / CS1316.
3. Depending on the model, place a jumper cap over pins 1-2 of the J17 or J10 jumper on the mainboard.

![Diagram showing J10 and J17 jumpers](image)

4. Plug in the CS1308 / CS1316 power adapter. The following directions appear on the KVM console screen:

   USERNAME AND PASSWORD INFORMATION AND PORT/USER INFORMATION HAS BEEN CLEARED. PLEASE POWER OFF THE SWITCH, REMOVE THE JUMPER, CLOSE THE CASE, THEN RESTART.

5. Unplug the power adapter again.
6. Remove the jumper cap from pins 1-2 of the J17/J10 jumper.
7. Replace the cover on the KVM switch.
8. Plug in the CS1308 / CS1316 power adapter.
9. You should now use the default username and password to log in to the CS1308 / CS1316.
# OSD Factory Default Settings

# About SPHD Connectors

This product uses SPHD connectors for its KVM and/or Console ports. We have specifically modified the shape of these connectors so that only KVM cables that we have designed to work with this product can be connected.
Troubleshooting

Operation problems can be due to a variety of causes. The first step in solving them is to make sure that all cables are securely attached and seated completely in their sockets.

In addition, updating the product’s firmware may solve problems that have been discovered and resolved since the prior version was released. If your product is not running the latest firmware version, we strongly recommend that you upgrade. See *The Firmware Upgrade Utility*, page 41, for upgrade details.

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Possible Cause</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Erratic behavior.</td>
<td>Unit not receiving enough power.</td>
<td>Check that the power adapter that was supplied with the unit is plugged in and functioning properly.</td>
</tr>
<tr>
<td>Mouse and/or Keyboard not responding.</td>
<td>Improper mouse and/or keyboard reset.</td>
<td>Unplug the cable(s) from the console port(s), then plug it/them back in.</td>
</tr>
</tbody>
