Multicast HDMI wireless transmitter

VE849T

- Up to Full HD
- 2 inputs and 1 output
- WHDI™ Pro Technology
- 1 transmitter streams to 4 receivers simultaneously

Multicast HDMI wireless receiver

VE849R

- Up to Full HD (30m)
- WHDI™ Pro Technology
- 1 transmitter streams to 4 receivers simultaneously

"Setup time? It took us longer to unbox than to setup the system."

- ICT Manager Plopsa Group

Requirements

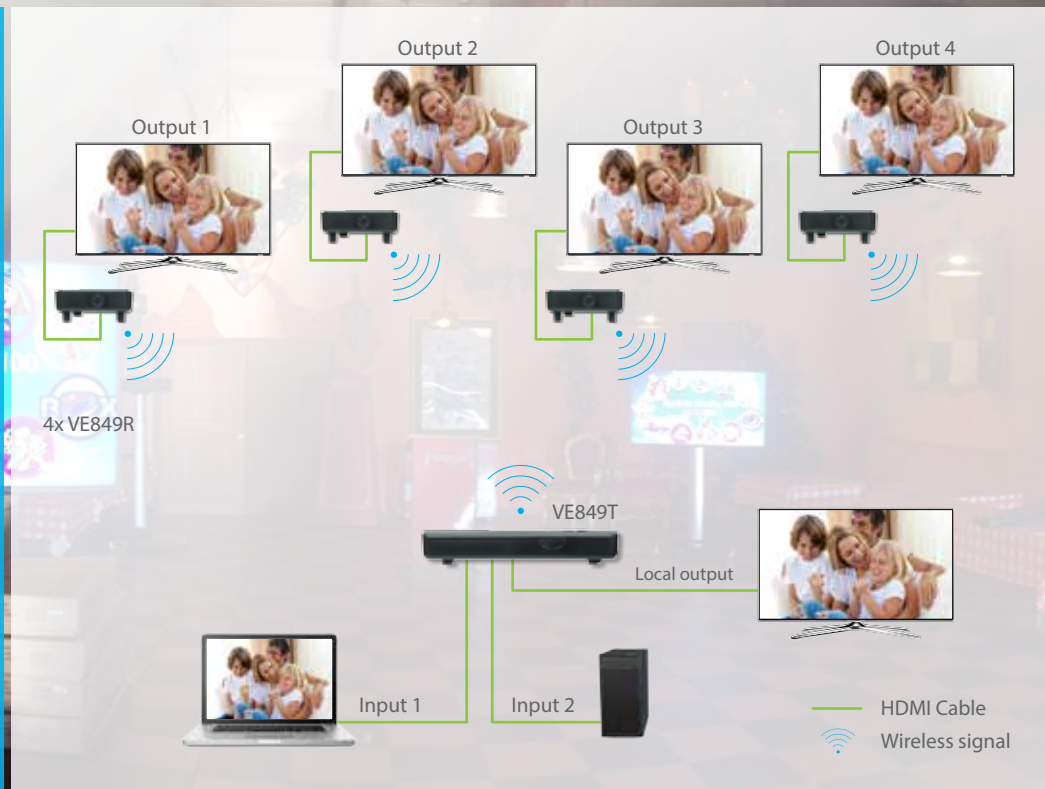

- A stable (5 GHz) wireless transmission in a public area, since cabling is not possible
- Stream Full HD content (presentations, slide-shows, video, ...) without any quality loss
- A local output to verify the transmitted content or to serve as a 5th display

Benefits

- **Wireless content** – Thanks to the wireless capability of the product no extra labor was required for implementing a cable infrastructure.
- **Only 1 transmitter** – One VE849T can transmit Full HD content to up to 5 displays simultaneously (1 local + 4 remote (30m)).
- **Easy to swap content** – With 2 HDMI inputs on the transmitter it requires no effort to change the content on all display devices. Simply swap between the 2 sources.

Plopsaland De Panne, Belgium

Plopsaland De Panne is one of six theme parks owned by the Studio 100 group, one of the largest independent global family entertainment companies worldwide. Plopsaland De Panne combines the magic of the Studio 100 characters with the pleasure of top attractions. Plopsaland De Panne recently opened a new hit, Prinsessia's Castle, which houses a romantic restaurant / foyer which is often used to host business conferences. For this room they were looking for a solution to enhance the unique experience by extending Full HD content over 4 displays. After a quick scan of the market, they found out that ATEN could offer the perfect solution.
