

EA1442 Reed Door Sensor

User Guide

Package Contents:

- 1 Switch
- 1 Magnet

Installation:

Note: Use the adhesive tape to secure one sensor to the door, and the other sensor to the rack frame so that when the door is closed the two meet flush but do not obstruct the doors ability to close completely. The sensors can be installed on the inside or outside of the frame, as long as they do not prevent the door from closing and the two flat ends meet. Connect a wire to the D+ port and a wire to the Ground port on the energy box or eco PDU, as shown below.
