**Rack Mounting**

For convenience and flexibility, the KN1000 can be mounted on a system rack.

To rack mount the unit do the following:

1. Remove the two original screws from the bottom of the unit (near the rear of the unit).
2. Using the screws provided with the rack mount kit, screw the mounting bracket into the KN1000 - as shown in the diagram.

Note: The illustrations show the mounting bracket attached to the bottom of the unit; it can also be attached to the top.

3. Screw the bracket into any convenient location on the rack.

Note: Rack screws are not provided. Use screws that are appropriate for your rack.

**DIN Rail Mounting**

To mount the KN1000 on a DIN rail:

1. Screw the mounting bracket to the back of the KN1000 as described in steps 1 and 2 of the wall mounting procedure.
2. Use the longer screws supplied with the Rack Mount Kit to screw the DIN rail brackets to the mounting bracket - as shown in the diagram.
3. Hang the unit on the DIN rail.

---

**Package Contents**

The KN1000 package consists of:

- 1 KN1000
- 2 Custom KVM Cable Sets
- 1 Custom Console Cable Set
- 1 USB 2.0 Virtual Media Cable
- 1 Power Adapter

**Important Notice**

Considering environmental protection, ATEN does not provide a fully printed user manual for this product. If the information contained in the Quick Start Guide is not enough for you to configure and operate your product, please visit our website www.aten.com, and download the full user manual.

**Requirements**

- **Remote User Computers**
  - For best results we recommend that the computers used to access the switch have at least a P III 1 GHz processor, with their screen resolution set to 1024 x 768.
  - Browsers must support 128 bit SSL encryption.
  - For best results, a network transfer speed of at least 128 kbps is recommended.
  - For the Windows Client AP, at least 25 MB of memory must be available after installation.
  - For the Java Client AP, the latest version of Sun’s Java Runtime Environment (JRE) must be installed, and at least 55 MB of memory must be available after installation.
  - For the browser-based WinClient Viewer, at least 60 MB of memory must be available after installation.
  - For the browser-based Java Applet Viewer the latest version of Sun's Java Runtime Environment (JRE) must be installed, and at least 130 MB of memory must be available after installation.
  - For the Log Server, you must have the Microsoft Jet OLEDB 4.0 or higher driver installed.

- **Servers**
  - A VGA, SVGA or multisync port
  - For USB KVM Cable Connections: a Type A USB port and USB host controller
  - For PS/2 KVM Cable Connections: 6-pin Mini-DIN keyboard and mouse ports

- **Cables**
  - Two custom KVM cable sets (1 USB; 1 PS/2) to link the KN1000 to a server or KVM switch are provided with this package.
  - One custom Console cable set to link the KN1000 to a local console is provided with this package.
  - USB KVM Cable Connections: 6- pin Mini-DIN keyboard and mouse ports
  - USB 2.0 cable for use with the Virtual Media function is provided with this package.
  - Cat 5e or higher Ethernet cable (not provided with this package), should be used to connect the KN1000 to the LAN, WAN, or Internet.
  - One power cables to connect the KN1000 to the server for power management functionality is provided with this package.

**Hardware Installation**

**DIN Rail Mounting**

To mount the KN1000 on a DIN rail:

1. Screw the mounting bracket to the back of the KN1000 as described in steps 1 and 2 of the wall mounting procedure.
2. Use the longer screws supplied with the Rack Mount Kit to screw the DIN rail brackets to the mounting bracket - as shown in the diagram.
3. Hang the unit on the DIN rail.
To install the KN1000, refer to the installation diagrams (the numbers correspond to the numbers of the steps), and do the following:

1. Ground the unit using the grounding wire provided with the KN1000 package.
2. Use the Console cable provided with this package to connect the KN1000’s Console port, to the local console keyboard, monitor and mouse.

To install the KN1000, refer to the installation diagrams (the numbers correspond to the numbers of the steps), and do the following:

1. Ground the unit using the grounding wire provided with the KN1000 package.
2. Use the Console cable provided with this package to connect the KN1000’s Console port, to the local console keyboard, monitor and mouse.

Note: The Console cable comes with connectors for both PS/2 and USB mice and keyboards – use the ones appropriate for your installation.

2. You can use any combination of keyboard and mouse connections. For example, you can use a PS/2 keyboard with a USB mouse.
3. Use the KVM cable provided with this package to connect the KN1000’s PC/KVM port, to the keyboard, video and mouse ports of the server or KVM switch that you are installing.
4. (Optional) If you want to use the virtual media function, use the USB 2.0 Virtual Media Cable provided with this package to connect a USB port on the server to the KN1000’s Virtual Media port.
5. (Optional) If you want to connect a PON device for remote power management, plug its cable into the PON port.
6. Plug the LAN or WAN cable into the KN1000’s LAN port.
7. Plug the RS-232 serial console device or modem, plug its cable into the RS-232 port.
8. Use the outlet power cord provided with the KN1000 package to connect the KN1000’s Power Outlet to the attached server for power management.
9. Use the power cord from the server to connect the KN1000’s Power Inlet to an AC power source.
10. Plug the power adapter cable into the KN1000’s power jack, then plug the power adapter into an AC power source.

This completes the hardware installation, and you are ready to start up.

Note: When starting up, be sure to first power on the KN1000, then power on the server or KVM switch.

When starting up, be sure to first power on the KN1000, then power on the server or KVM switch.

Note: For security purposes, a login string may have been set by the administrator. If so, you must include: a forward slash and the login string along with the IP address when you log in. For example: 192.168.0.100 KN1000 If you don’t know the IP address and login string, ask your Administrator. The default IP address is 192.168.0.100

2. A Security Alert dialog box appears. Accept the certificate – it can be trusted. If a second certificate appears, accept it as well.

The KN1000 can be accessed either from an Internet type browser, via Windows and Java application (AP) program, or via PPP/FDDI dial-in.

 Logging In

To operate the KN1000 from an Internet browser, begin by logging in:

1. Open your browser and specify the IP address of the KN1000 you want to access in the browser’s URL location bar.

Note: For security purposes, the KN1000’s login page appears:

2. A Security Alert dialog box appears. Accept the certificate – it can be trusted. If a second certificate appears, accept it as well.

3. Provide a valid Username and Password (set by the KN1000 administrator), then click Login to continue.

Note: 1. If you are the administrator, and are logging in for the first time, use the default Username: administrator; and the default Password: password. For security purposes, we strongly recommend you remove these and give yourself a unique Username and Password.
2. If you supplied an invalid login, the authentication routine will return this message: Invalid Username or Password. Please try again. If you see this message, log in again being careful with the Username and Password.

After you have successfully logged in, the KN1000 Main Screen appears:

Mouse Setup

If you use a PS/2 custom KVM cable to connect to the server, perform the following mouse setting procedures.

Windows Systems:

Note: You must use the generic mouse driver supplied with Windows.

• XP / Server 2003 – middle position; Enhance pointer precision: off
• 2000 / ME – Mouse motion: middle position; Acceleration: off
• NT / 98 – Mouse speed: slowest

Sun / Linux Systems:

Open a terminal session and issue the following command:

• Solaris: mouse 1
• Linux: mouse 0 or mouse 1 (if one doesn’t work try the other.)
