

Corporate // Digital Signage

Bullhorn | United Kingdom

Bullhorn recently moved into a newly built office and would like to setup a new information broadcasting system. This system will broadcast SKY/BBC TV programs or company related digital contents to the office. They would like to reduce the quantity of cables and power adaptors, and have the easiest way possible of controlling the switch from a single handheld device.

Challenges

Reduce installation cost while managing the amount of cables and power adaptors effectively in two locations.

Switching and delivering quality video content over long distances.

Incorporate HDCP protection due to issues with transmitting Skybox Satellite TV to offices.

Solutions

Control System
VK2100

Video Matrix Switches
VM0808H

Video Splitters
VS1818T

Video Extender
VE802
VE812

Benefits

The VE802 features Power over HDBaseT (POH) which can send power over Cat 5e/6/6a cables without an additional power supply.

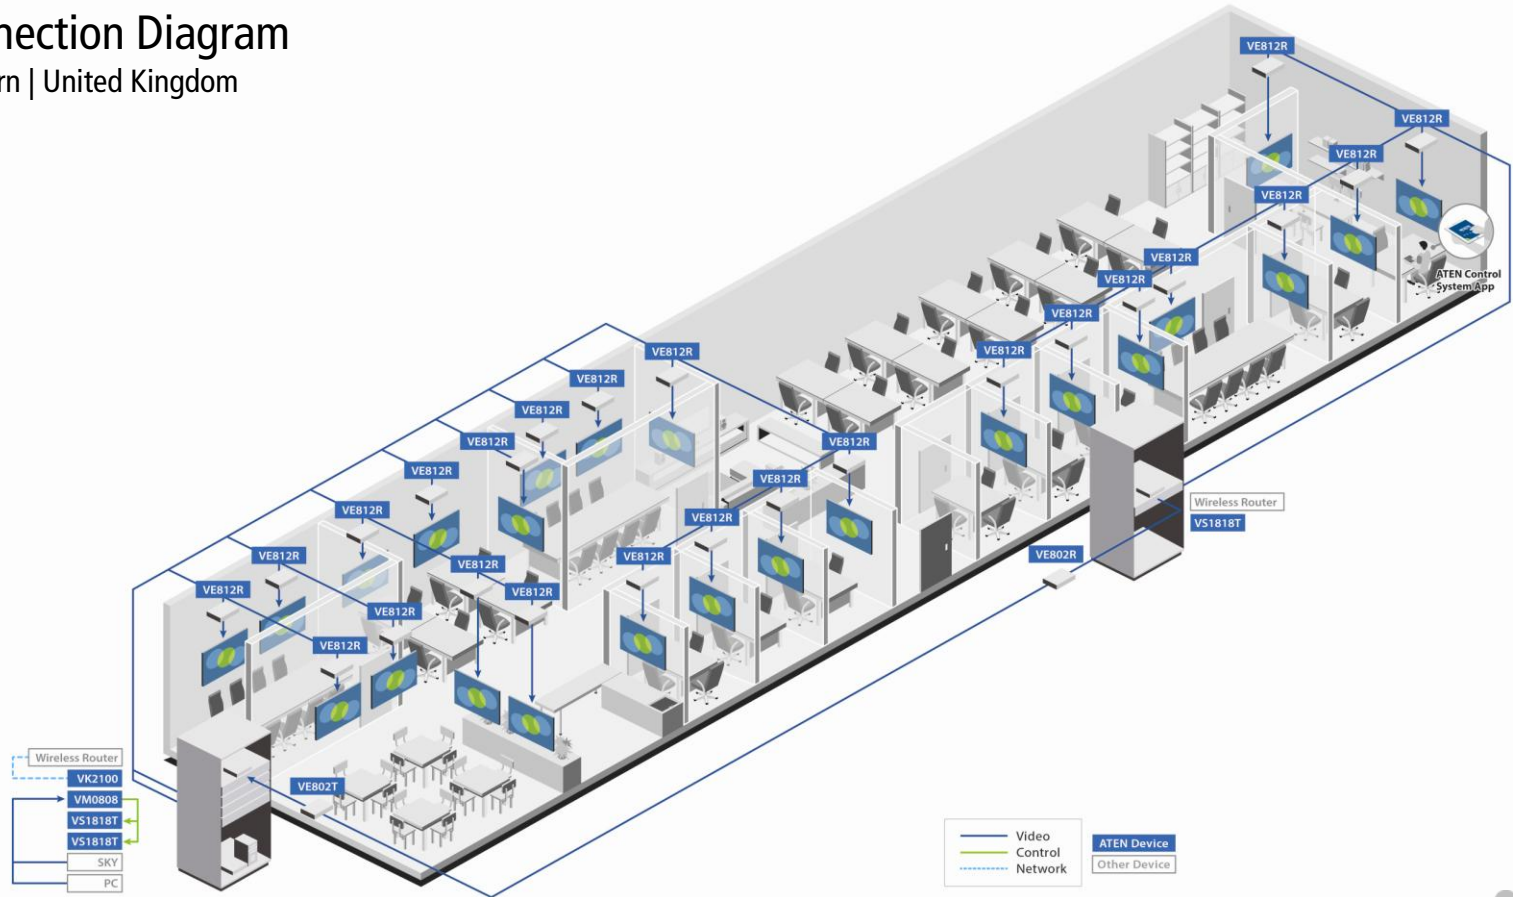

The ATEN Control System allows centralized control of all multimedia devices on the network.

ATEN's HDMI splitter, extender, and matrix switch are all HDCP-compliant. The office can therefore display video from the Skybox Satellite TV system without issue.
